Coating Material Change [Gold] / Änderung am Überzug [Gold]

Pancon GmbH is announcing a change of their series 100&156 centerline Mascon® Headers. The redesign was primarily due to the higher costs imposed by the raw material suppliers. In order to keep the production costs at reasonable levels we will use in the future a Palladium/Gold combination as surface protection. This is the case already in other Pancon product lines.

The technical application parameter do not change. The part numbers remain the same.

- old: Gold plated parts had 15µm of gold (Au) plating.
 new: PdNi plated parts have 12µm of PdNi and gold (Au) flash.

Parts concerned: **only the Gold Plated parts MxxS1xx-xx-xB & Cx1xxFxx-xx-xB**
